Breast Cancer Factsheet: Insights & Key Developments

Key Insights on Breast Cancer Care and Infrastructure

Core Pillars:

1. Infrastructure
2. Treatment Access, Research Funding and Awareness Campaigns
3. Survival Rates, Early Detection and Palliative Care
4. Utilization of Biomarkers
5. Clinical Guidelines
6. Reimbursement
7. Breast Cancer Screening

Breast cancer remains one of the most prevalent cancers worldwide, affecting millions of individuals each year. Despite advancements in diagnostics, treatment, and awareness, disparities in access to care, molecular testing, and specialized centers persist.

This factsheet provides a comprehensive overview of key pillars shaping breast cancer care, including specialized infrastructure, treatment accessibility, research funding, early detection, and palliative care.

- Annual Diagnoses: Approximately 8,000 women are diagnosed with breast cancer each year.
- Survival Rates: Around 80% of women diagnosed with breast cancer survive.
- Screening Participation: Sweden offers a national mammography program, providing free screenings every two years for women aged 40 to 74. The country has one of the highest screening rates globally.
- Disparities in Screening: Screening participation is lower among immigrant women, with only about 60% attending their mammogram appointments compared to 80% of Swedish-born women. Factors contributing to this include language barriers, cultural differences, and lack of awareness.
- Impact of Screening on Mortality: Mammography screening has been associated with a significant reduction in the risk of dying from breast cancer and a lower rate of advanced-stage diagnoses.

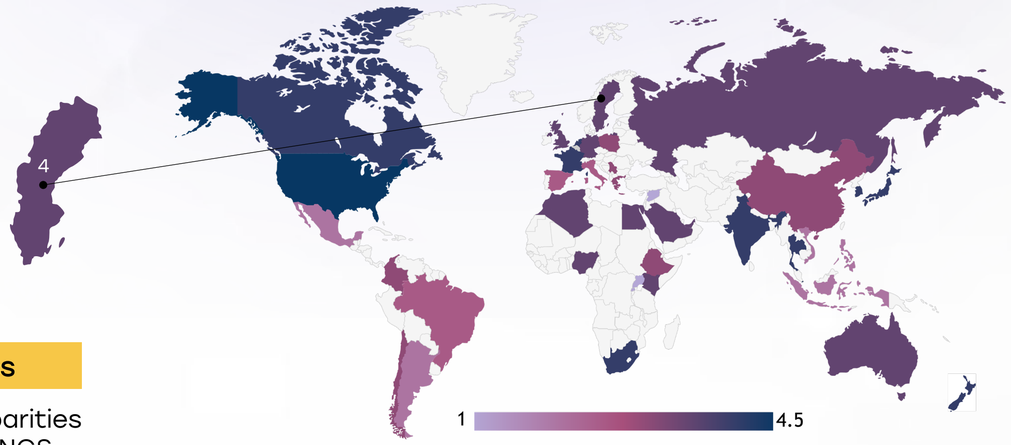
Infrastructure



Strengths

- >10 Comprehensive Cancer Centers; centralized, multidisciplinary care.
- HER2, ER, PR testing exceeds 95% compliance.

Weakness

- Regional disparities in access to NGS and liquid biopsy.

S W O T

Opportunity

- Expand digital pathology and tele-genetics to regional hospitals.

Threats

- Unequal biomarker access may delay precision treatments in rural areas.

5. Advanced nationwide infrastructure, widespread availability in public and private sectors, integration with clinical practice.

4. Strong infrastructure in major hospitals and cancer centers, some regional disparities.

3. Moderate infrastructure, primarily in private settings or research institutions.

2. Limited infrastructure, available only in select centers or for high-cost private testing.

1. Minimal or no infrastructure, testing mostly unavailable or sent abroad.

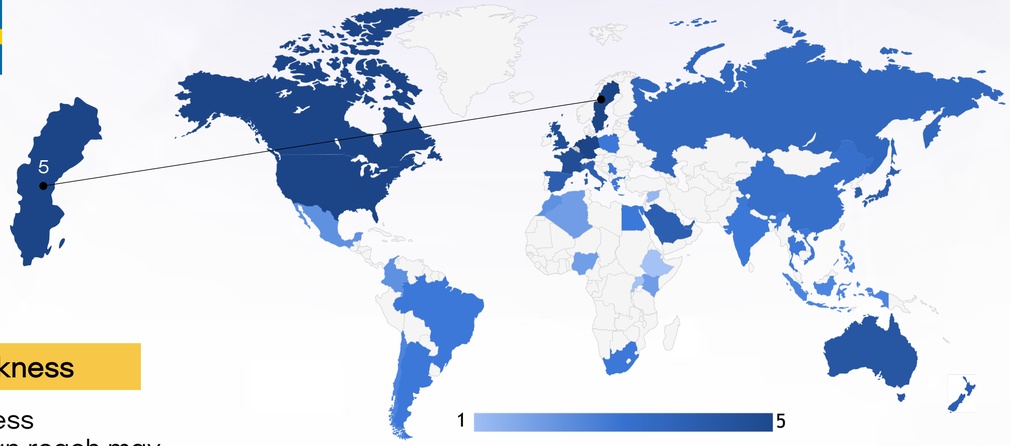
Treatment Access, Research Funding and Awareness Campaigns



Strengths

- Universal healthcare guarantees access to surgery, radiotherapy, and targeted drugs.
- €50M+ in annual breast cancer research funding.

Weakness

- Awareness campaign reach may be lower in immigrant populations.

S W O T

Opportunity

- Scale community-tailored outreach to improve screening in underserved groups.

Threats

- Cultural/language barriers may widen inequalities in early detection.

5. Strong healthcare infrastructure with comprehensive treatment access, high research funding, and nationwide awareness campaigns. Patients have access to advanced therapies, clinical trials, and widespread early detection programs.

4. Well-developed system with good treatment availability, strong research funding, and effective but regionally focused awareness campaigns. Some disparities may exist in rural areas or between public and private sectors.

3. Moderate development, with specialized treatments available in major hospitals, research funding concentrated on specific cancers, and occasional but limited awareness efforts. Healthcare access may be restricted by cost or geography.

2. Limited system where cancer treatment is available only in select urban centers, research funding is minimal or sporadic, and awareness campaigns are rare or underfunded. Patients often face long wait times or financial barriers.

1. Poor infrastructure with severe barriers to treatment, little to no research funding, and lack of structured awareness campaigns. Cancer care is largely inaccessible, with many patients relying on out-of-pocket expenses or external aid.

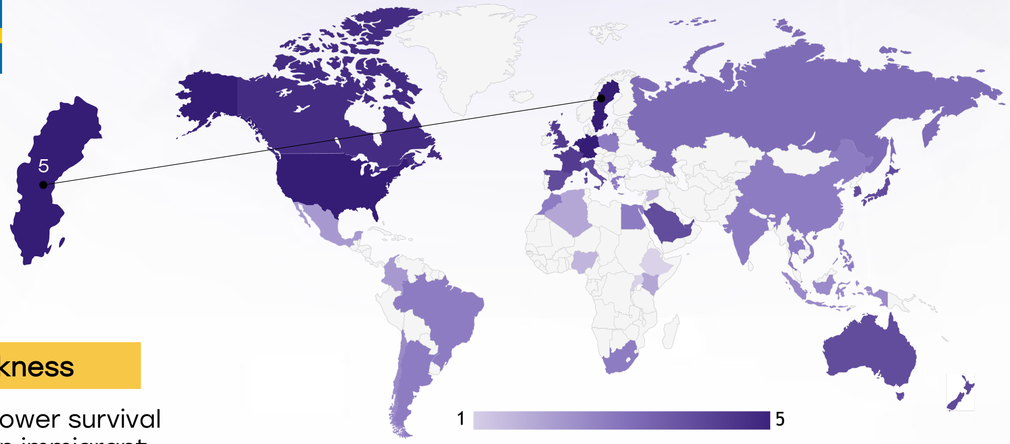
Survival Rates, Early Detection and Palliative Care



Strengths

- 5-year survival exceeds 90%.
- 80% of cases diagnosed at early stage.

Weakness

- Slightly lower survival in certain immigrant and rural populations.

S W O T

Opportunity

- Strengthen equitable access to palliative and follow-up care.

Threats

- Gaps in late-stage follow-up or support services for marginalized groups.

5. High survival rates, strong early detection programs, and well-established palliative care services. Patients have access to timely diagnosis, advanced treatments, and comprehensive end-of-life care.

4. Good survival rates, effective early detection efforts, and accessible but regionally limited palliative care. Some disparities may exist in rural areas or for specific cancer types.

3. Moderate survival rates, early detection available but not widespread, and palliative care services mainly in urban centers. Some patients experience delays in diagnosis or limited end-of-life care.

2. Low survival rates, early detection efforts are inconsistent or underfunded, and palliative care is minimal or only available in select hospitals. Cancer patients face significant access barriers.

1. Very low survival rates, poor early detection infrastructure, and almost no palliative care services. Many patients are diagnosed late and lack proper support for pain management and end-of-life care.

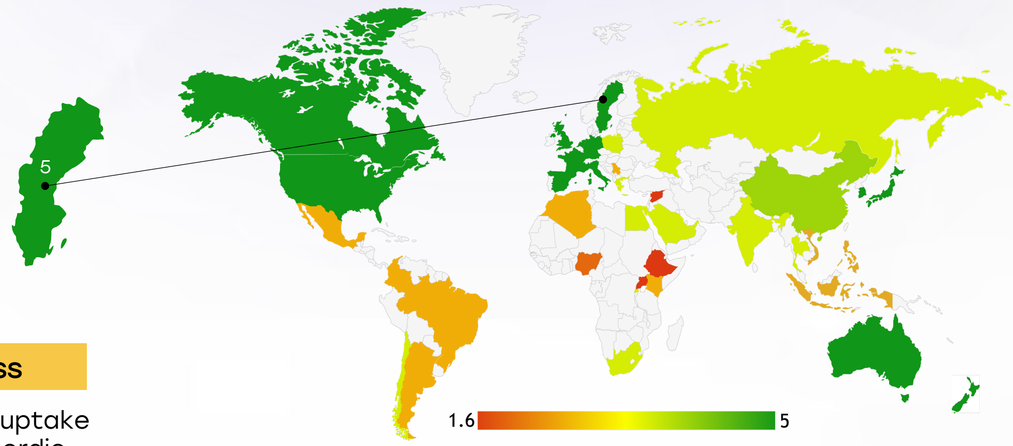
Utilization of Biomarkers



Strengths

- >95% receive HER2, ER, PR testing.
- >50% BRCA testing among high-risk patients.

Weakness

- Lower BRCA uptake than other Nordic countries (30–40%).

S W O T

Opportunity

- Expand BRCA coverage and integrate liquid biopsy pilots.

Threats

- Underuse of genomic profiling in smaller centers may delay novel therapies.

5. 80% Biomarker testing is widely available and routinely performed as part of standard clinical practice. Strong integration into treatment decisions, with national coverage and reimbursement ensuring accessibility.

4. 61-80%. Biomarker testing is commonly used, but access may be limited in certain regions or patient groups. Some disparities exist in coverage or affordability, but it is still a crucial part of cancer diagnostics

3. 41-60% Moderate utilization, often restricted to major hospitals or private healthcare settings. Some patients may not receive biomarker testing due to cost or limited availability in public healthcare systems.

2. 20-40% Biomarker testing is available but underutilized, with significant barriers such as high costs, lack of awareness, or limited infrastructure. Many patients may not receive recommended biomarker assessments.

1. <20% Biomarker testing is rarely performed, often due to lack of infrastructure, awareness, or financial barriers. Patients typically do not receive targeted therapies based on biomarker status.

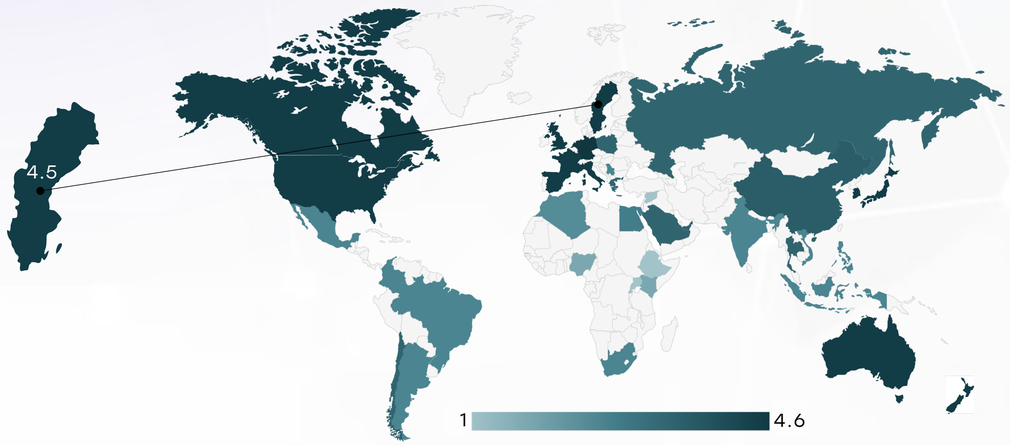
Sweden

Clinical Guidelines



Strengths

- 95%+ guideline adherence across oncology centers; updated protocols.

Weakness

- Slight lag in implementation in smaller or remote hospitals.

S W O T

Opportunity

- Strengthen CME and integrate digital access to updates.

Threats

- Decentralized updates risk minor inconsistencies in care delivery.

Reimbursement

Strengths

- Full coverage for HER2, ER, PR, BRCA1/2, and even NGS in high-risk cases.
- No out-of-pocket costs for treatments or screening.

Weakness

- High public cost may be subject to future budget scrutiny.

S W O T

Opportunity

- Optimize use of AI and digital tools to manage long-term sustainability.

Threats

- Increasing cost of novel drugs may pressure reimbursement thresholds.

O Yes - A structured reimbursement system exists, ensuring biomarker testing is covered through national healthcare systems, insurance, or public-private partnerships. Patients face no direct financial burden.

O Partial - A reimbursement framework is in place, but patients may still have out-of-pocket expenses such as co-pays, limited coverage, or financial caps on testing.

✖ No - No formal reimbursement system exists, meaning patients must fully cover the cost of biomarker testing out-of-pocket.

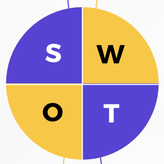
Breast Cancer Screening

Strengths

- >80% screening participation.
- Fully covered biennial program with AI integration.

Weakness

- Only ~60% participation among immigrant women.



Opportunity

- Boost culturally adapted campaigns and translation services.

Threats

- Delayed diagnoses in underserved groups could undermine overall gains.

Country	Breast Cancer Screening
United States	Biennial mammograms (50-74 years)
United Kingdom	Triennial mammograms (50-71 years)
Canada	Mammograms every 2-3 years (50-74 years)
Australia	Biennial mammograms (50-74 years)
Germany	Mammograms every 2 years (50-69 years)
France	Biennial mammograms (50-74 years)
Netherlands	Mammograms every 2 years (50-75 years)
Sweden	Mammograms every 18-24 months (40-74 years)
Italy	Mammograms every 2 years (50-69 years)
Spain	Mammograms every 2 years (50-69 years)
Poland	Mammograms every 2 years (50-69 years)
Japan	Mammograms every 2 years (40+ years)
South Korea	Biennial mammograms (40+ years)
China	Regional mammogram programs (40-69 years)
India	Opportunistic screening
Singapore	Biennial mammograms (50-69 years)
Saudi Arabia	Opportunistic screening; regional programs for women aged 40+
UAE	Opportunistic screening; encouraged every 2 years for 40-69 years
Syria	No national program; limited local initiatives due to conflict

Country	Breast Cancer Screening
Thailand	Biennial mammograms (50-69 years)
South Africa	Opportunistic screening
Kenya	No national program
Nigeria	No national program
Egypt	National awareness campaigns
Morocco	National program for 45-69 years
Algeria	Planned national program (50-69 years)
Ethiopia	No national program
Mexico	Biennial mammograms (40-69 years)
Brazil	Biennial mammograms (50-69 years)
Argentina	Biennial mammograms (50-69 years)
Chile	Mammograms every 3 years (50-69 years)
Colombia	Biennial mammograms (50-69 years)
New Zealand	Biennial mammograms (45-69 years)
Greece	Biennial mammograms (50-69 years)
Rwanda	No national program
Uganda	No national program
Serbia	Biennial mammograms (50-69 years)
Indonesia	Opportunistic screening; no national mammography program
Vietnam	Regional mammography programs; pilot programs in urban areas (age 45–69)
Philippines	Opportunistic screening; mammography recommended every 2 years for women 50+
Russia	National program for biennial mammograms (50–69 years)
