

# Breast Cancer Factsheet: Insights & Key Developments

Key Insights on Breast Cancer Care  
and Infrastructure

## Core Pillars:

1. Infrastructure
2. Treatment Access, Research Funding and Awareness Campaigns
3. Survival Rates, Early Detection and Palliative Care
4. Utilization of Biomarkers
5. Clinical Guidelines
6. Reimbursement
7. Breast Cancer Screening

Breast cancer remains one of the most prevalent cancers worldwide, affecting millions of individuals each year. Despite advancements in diagnostics, treatment, and awareness, disparities in access to care, molecular testing, and specialized centers persist.

This factsheet provides a comprehensive overview of key pillars shaping breast cancer care, including specialized infrastructure, treatment accessibility, research funding, early detection, and palliative care.

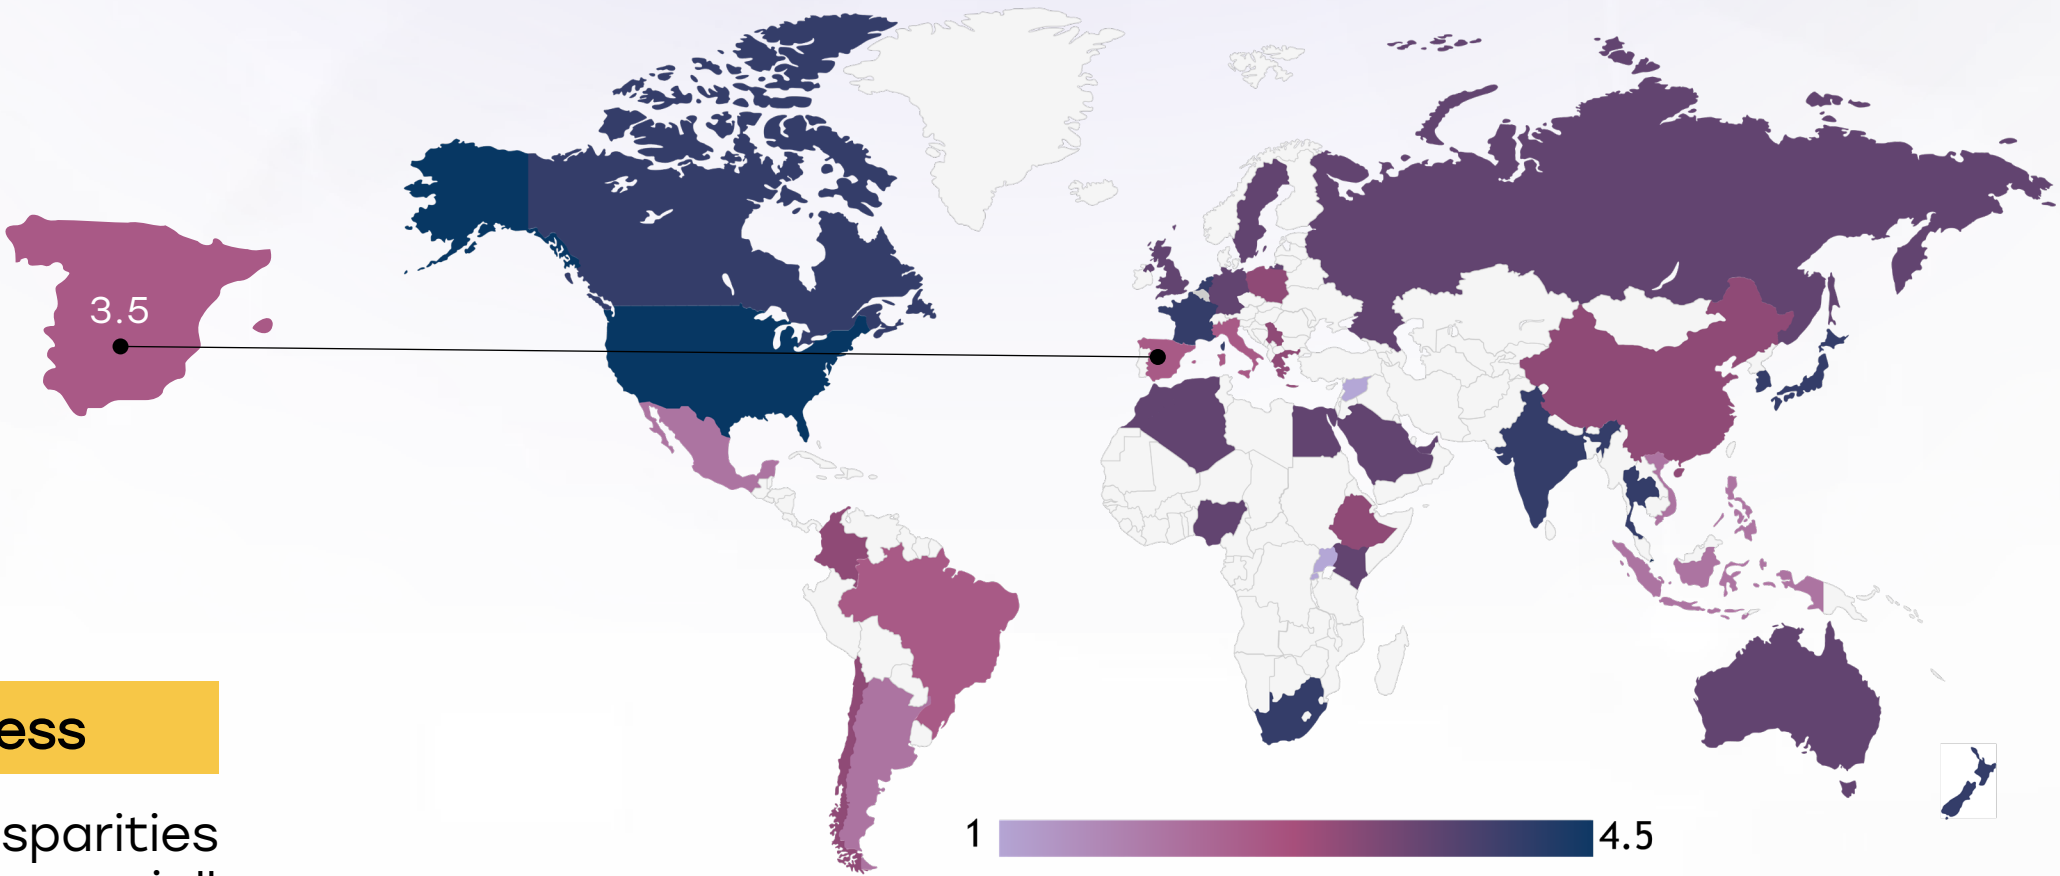

- Annual Diagnoses: Estimated 36,395 new cases of breast cancer among women in 2024, making it the most frequently diagnosed cancer in women.
- Incidence Rate: Breast cancer accounts for 31% of all cancer cases among women, aligning with the European Union average.
- Annual Mortality: In 2022, there were approximately 6,754 deaths due to breast cancer, an increase from 6,614 in 2021.
- 5-Year Survival Rate: Around 85.5%, reflecting improvements in early detection and treatment.
- Prevalence: Approximately 474,546 prevalent cases over a 5-year period as of 2020.
- Lifetime Risk: Estimated that 1 in 8 women in Spain will be diagnosed with breast cancer during their lifetime.
- Age Distribution: Most cases occur in women aged 50-69 years.
- Screening Participation (Ages 50-69): Around 80% of women in the target age group participate in mammography screening programs.
- Mammogram Detection: 6 out of 1,000 women screened are diagnosed with breast cancer.
- Stage at Diagnosis: Approximately 64% of cases are detected at an early stage (Stage I or II).

# Spain

## Infrastructure

### Strengths

- Strong network of specialized cancer centers in major cities (Madrid, Barcelona, Valencia).
- HER2/ER/PR testing routine in ~80–85% of patients.

### Weakness

- Regional disparities in access, especially in rural areas.

### Opportunity

- Expand NGS and molecular diagnostics to underserved regions.

### Threats

- Inconsistent BRCA testing availability outside major centers.

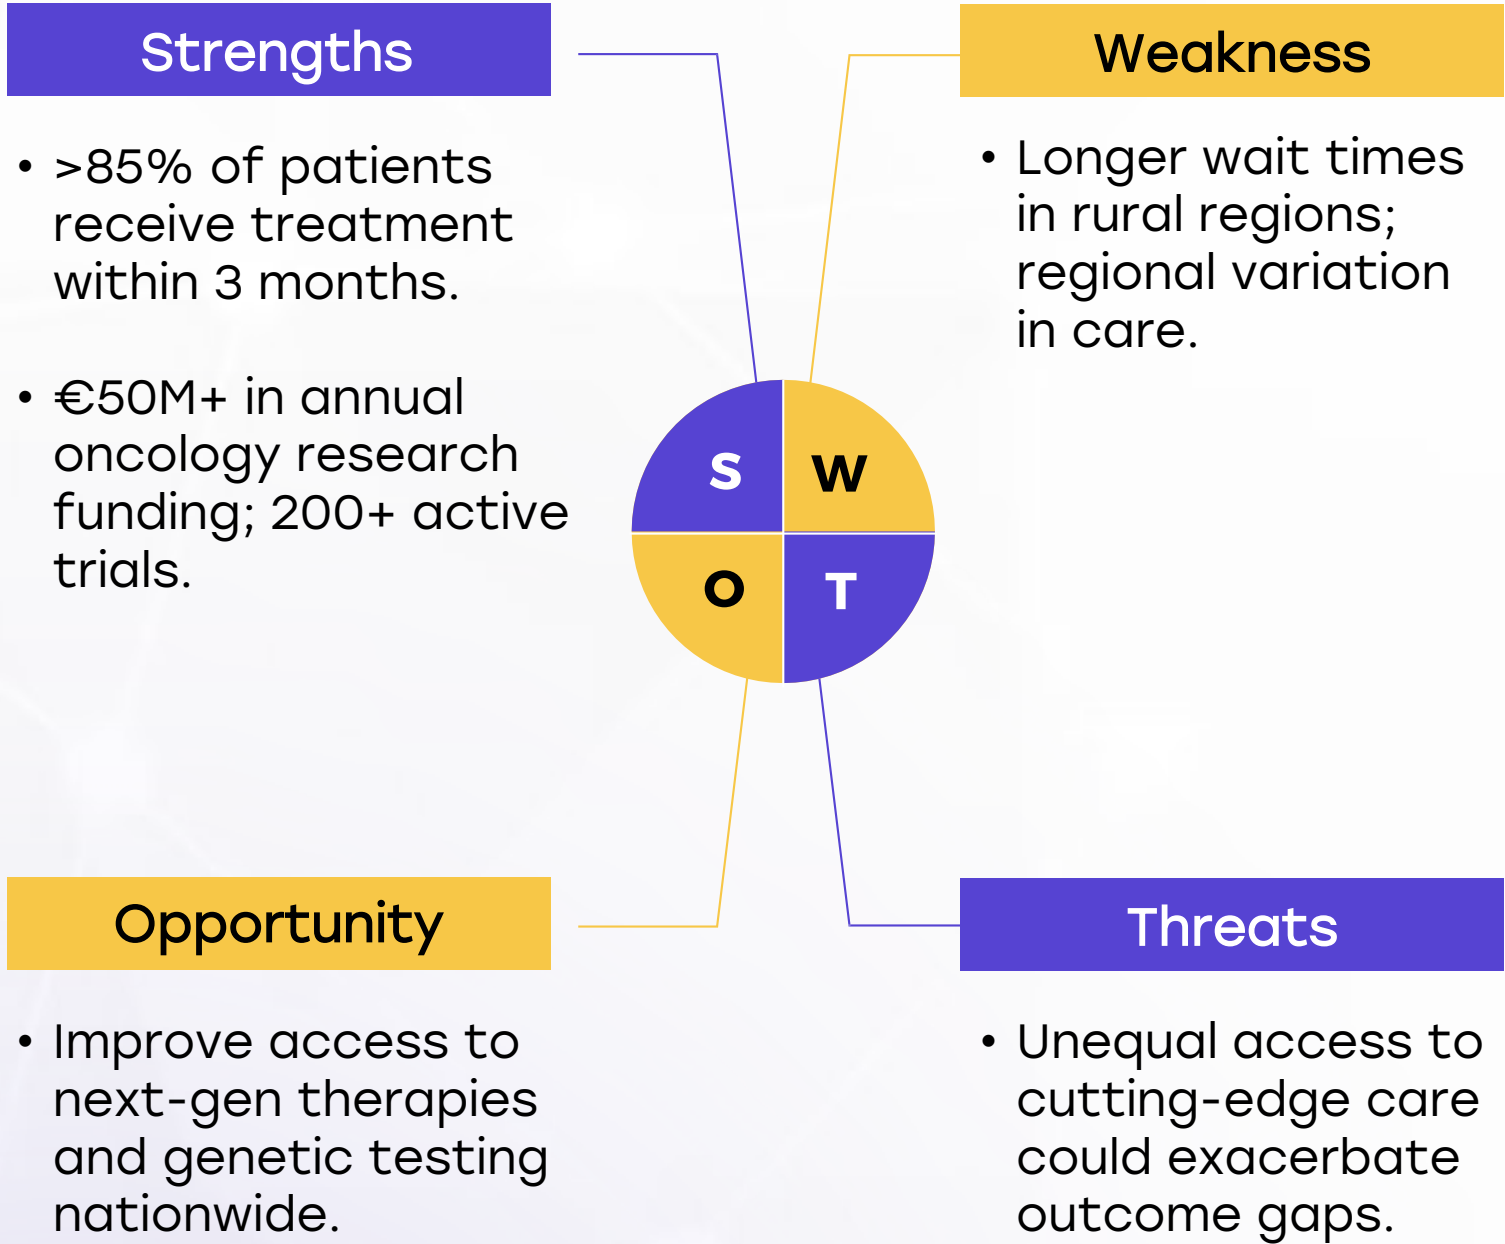

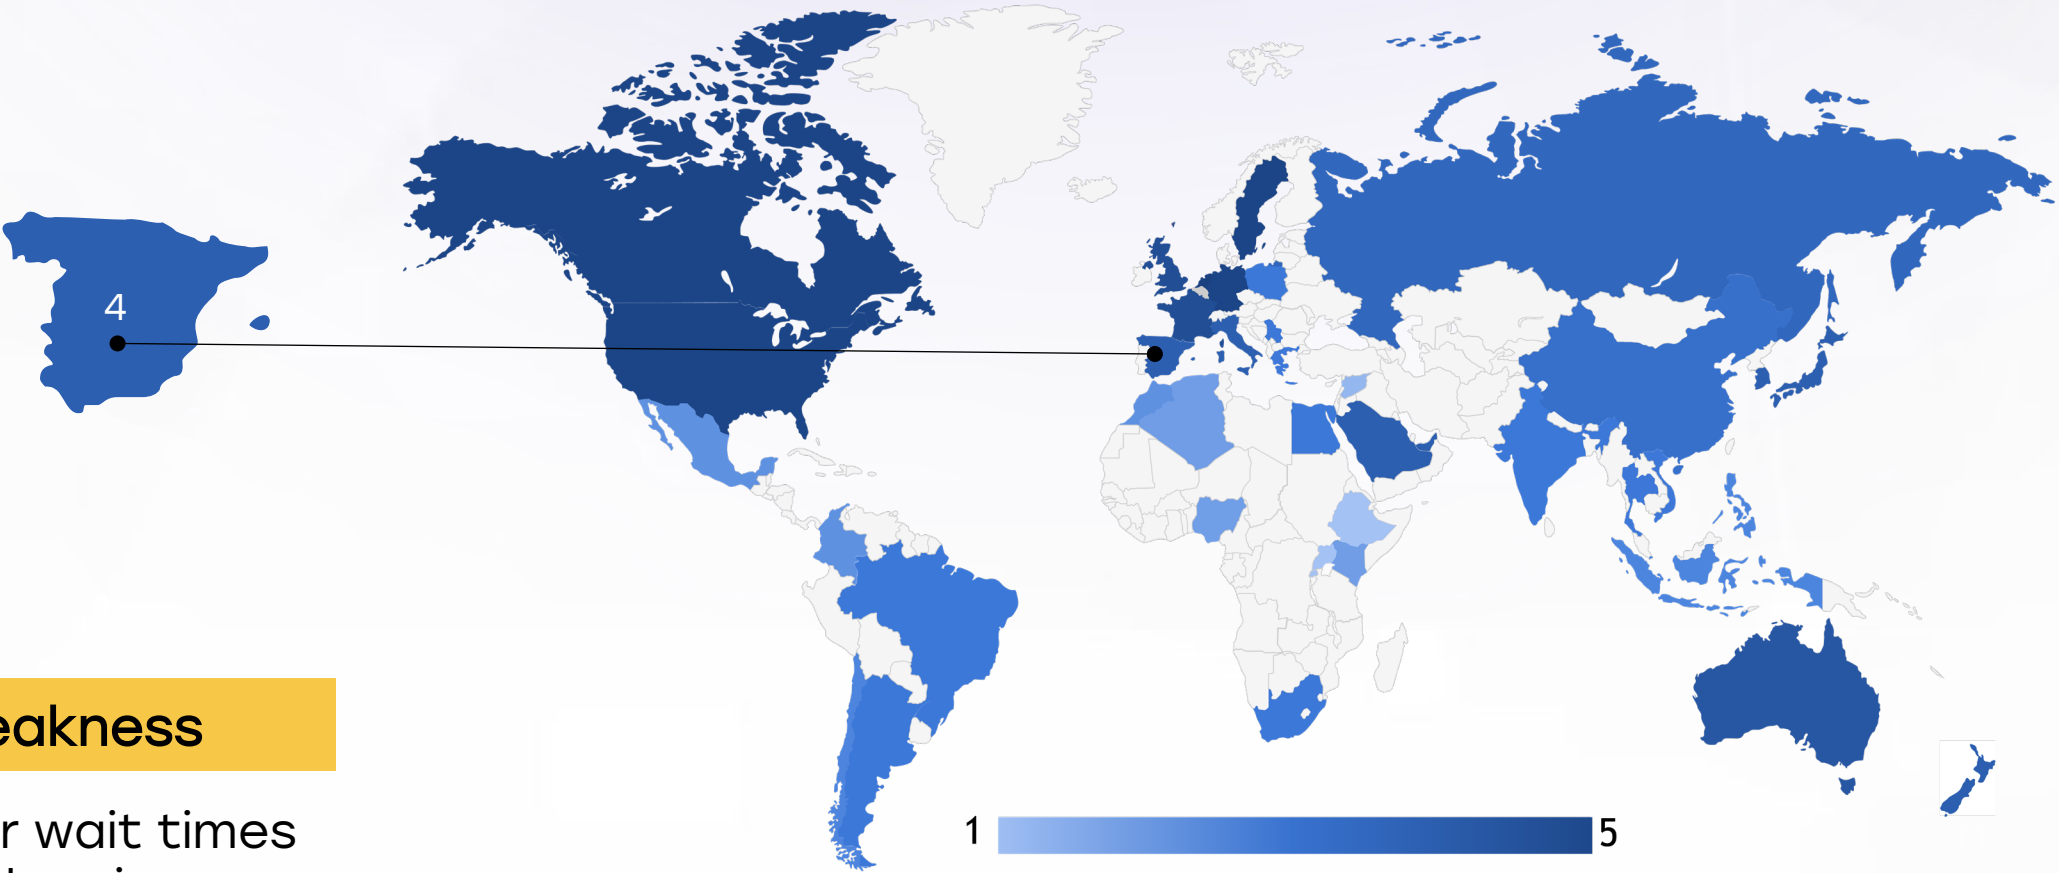

- 5. Advanced nationwide infrastructure, widespread availability in public and private sectors, integration with clinical practice.
- 4. Strong infrastructure in major hospitals and cancer centers, some regional disparities.
- 3. Moderate infrastructure, primarily in private settings or research institutions.
- 2. Limited infrastructure, available only in select centers or for high-cost private testing.
- 1. Minimal or no infrastructure, testing mostly unavailable or sent abroad.

| Country        | Specialized Centers | Genetic & Molecular Testing Infrastructure |
|----------------|---------------------|--|
| South Africa   |                     |  |
| Kenya          |                     |  |
| Nigeria        |                     |  |
| Egypt          |                     |  |
| Morocco        |                     |  |
| Algeria        |                     |  |
| Ethiopia       |                     |  |
| India          |                     |  |
| Japan          |                     |  |
| South Korea    |                     |  |
| China          |                     |  |
| Thailand       |                     |  |
| Singapore      |                     |  |
| United Kingdom |                     |  |
| Germany        |                     |  |
| France         |                     |  |
| Netherlands    |                     |  |
| Sweden         |                     |  |
| Italy          |                     |  |
| Spain          |                     |  |
| Poland         |                     |  |
| Mexico         |                     |  |
| Brazil         |                     |  |
| Argentina      |                     |  |
| Chile          |                     |  |
| Colombia       |                     |  |
| United States  |                     |  |
| Canada         |                     |  |
| Australia      |                     |  |
| New Zealand    |                     |  |
| Greece         |                     |  |
| Rwanda         |                     |  |

| Russia         |                     |  |

# Spain

## Treatment Access, Research Funding and Awareness Campaigns

5. Strong healthcare infrastructure with comprehensive treatment access, high research funding, and nationwide awareness campaigns. Patients have access to advanced therapies, clinical trials, and widespread early detection programs.
4. Well-developed system with good treatment availability, strong research funding, and effective but regionally focused awareness campaigns. Some disparities may exist in rural areas or between public and private sectors.
3. Moderate development, with specialized treatments available in major hospitals, research funding concentrated on specific cancers, and occasional but limited awareness efforts. Healthcare access may be restricted by cost or geography.
2. Limited system where cancer treatment is available only in select urban centers, research funding is minimal or sporadic, and awareness campaigns are rare or underfunded. Patients often face long wait times or financial barriers.
1. Poor infrastructure with severe barriers to treatment, little to no research funding, and lack of structured awareness campaigns. Cancer care is largely inaccessible, with many patients relying on out-of-pocket expenses or external aid.

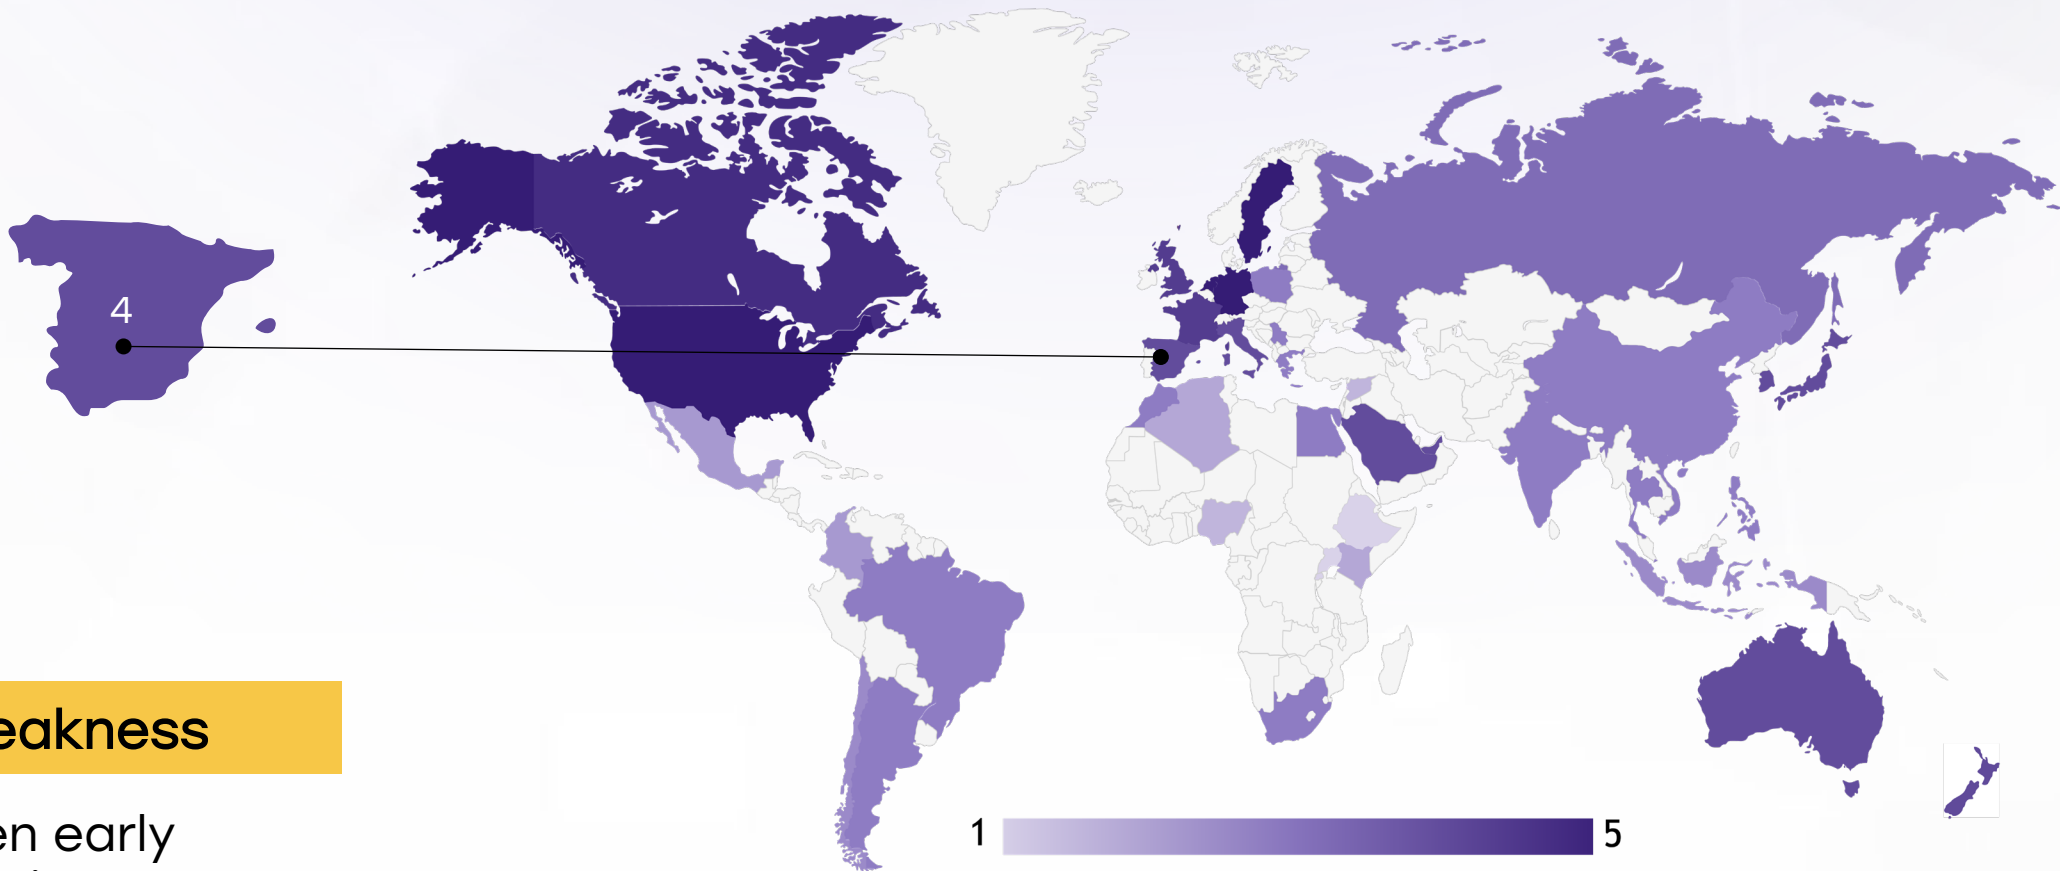

| Country        | Treatment Access | Research Funding | Awareness Campaigns |
|----------------|------------------|------------------|---------------------|
| South Africa   | ●                | ●                | ●                   |
| Kenya          | ●                | ●                | ●                   |
| Nigeria        | ●                | ●                | ●                   |
| Egypt          | ●                | ●                | ●                   |
| Morocco        | ●                | ●                | ●                   |
| Algeria        | ●                | ●                | ●                   |
| Ethiopia       | ●                | ●                | ●                   |
| India          | ●                | ●                | ●                   |
| Japan          | ●                | ●                | ●                   |
| South Korea    | ●                | ●                | ●                   |
| China          | ●                | ●                | ●                   |
| Thailand       | ●                | ●                | ●                   |
| Singapore      | ●                | ●                | ●                   |
| United Kingdom | ●                | ●                | ●                   |
| Germany        | ●                | ●                | ●                   |
| France         | ●                | ●                | ●                   |
| Netherlands    | ●                | ●                | ●                   |
| Sweden         | ●                | ●                | ●                   |
| Italy          | ●                | ●                | ●                   |
| Spain          | ●                | ●                | ●                   |
| Poland         | ●                | ●                | ●                   |
| Mexico         | ●                | ●                | ●                   |
| Brazil         | ●                | ●                | ●                   |
| Argentina      | ●                | ●                | ●                   |
| Chile          | ●                | ●                | ●                   |
| Colombia       | ●                | ●                | ●                   |

# Spain

## Survival Rates, Early Detection and Palliative Care

### Strengths

- 5-year survival ~85.5%; 64% diagnosed early.
- Palliative care integrated in public hospitals.

### Weakness

- Uneven early detection and palliative access across regions.

### Opportunity

- Expand home-based palliative care and outreach in rural areas.

### Threats

- Regional inequalities could hinder further survival improvements.

5. High survival rates, strong early detection programs, and well-established palliative care services. Patients have access to timely diagnosis, advanced treatments, and comprehensive end-of-life care.

4. Good survival rates, effective early detection efforts, and accessible but regionally limited palliative care. Some disparities may exist in rural areas or for specific cancer types.

3. Moderate survival rates, early detection available but not widespread, and palliative care services mainly in urban centers. Some patients experience delays in diagnosis or limited end-of-life care.

2. Low survival rates, early detection efforts are inconsistent or underfunded, and palliative care is minimal or only available in select hospitals. Cancer patients face significant access barriers.

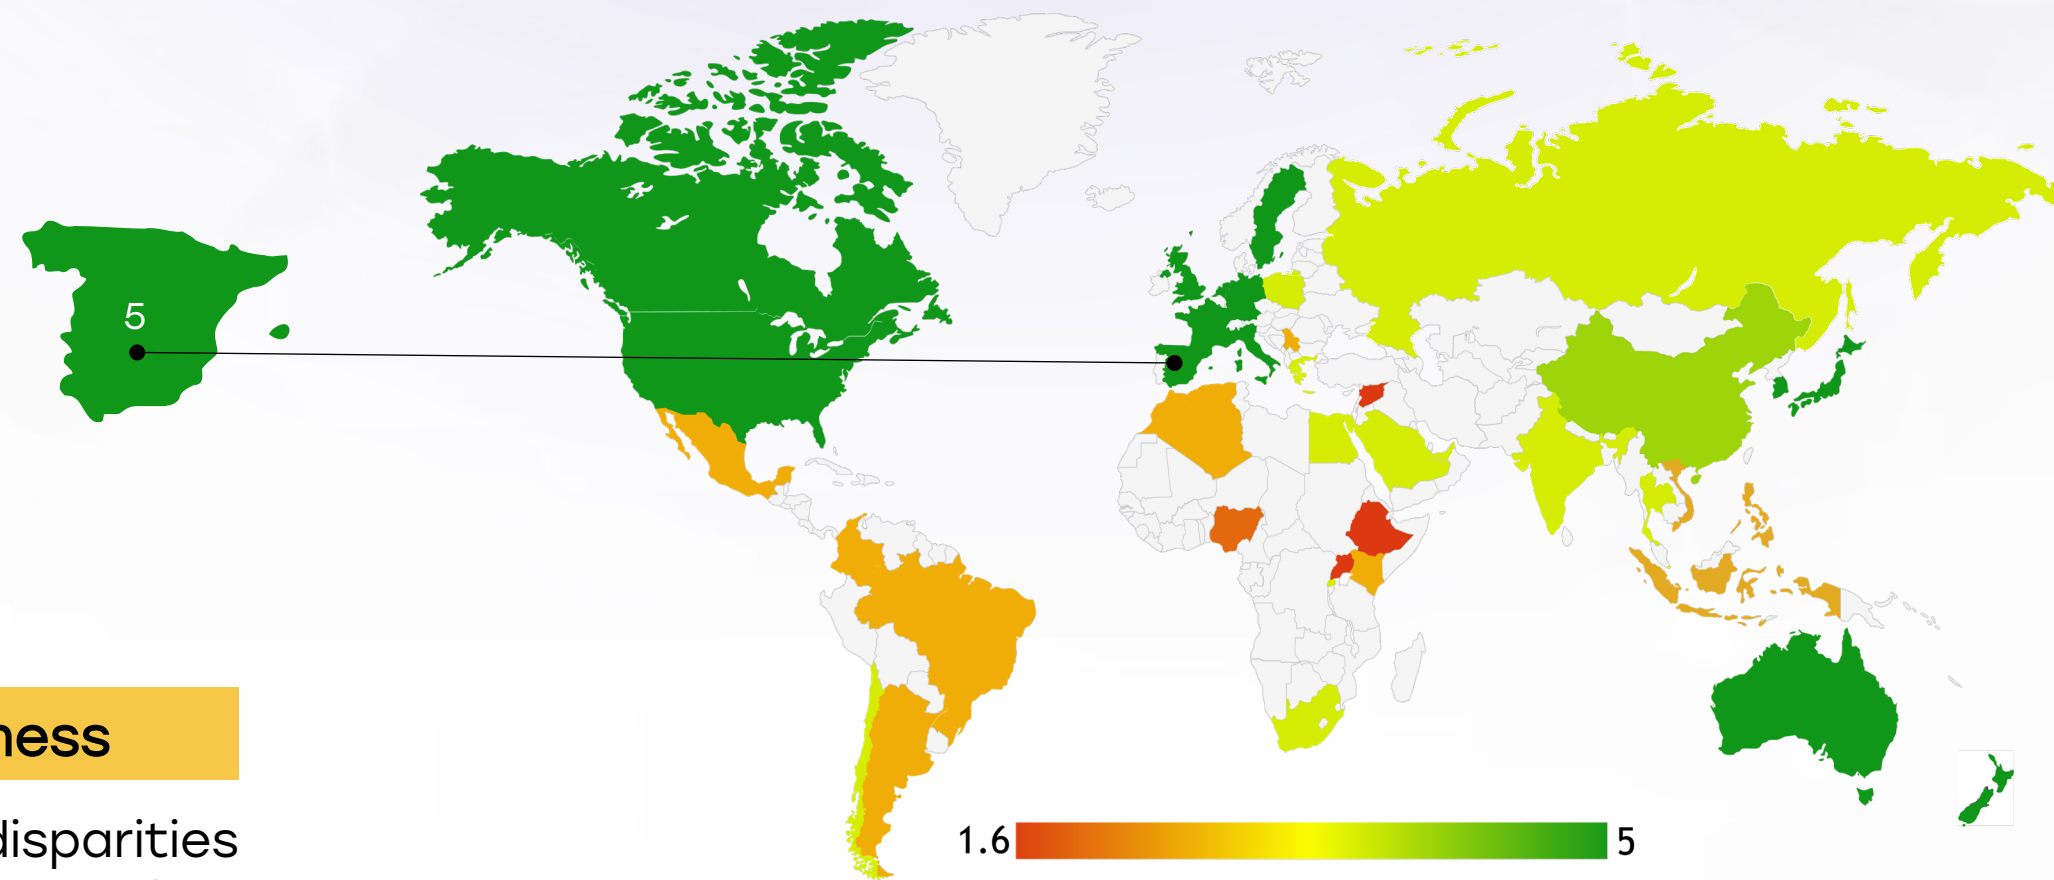

1. Very low survival rates, poor early detection infrastructure, and almost no palliative care services. Many patients are diagnosed late and lack proper support for pain management and end-of-life care.

| Country        | Survival Rates | Early Detection | Palliative Care |
|----------------|----------------|-----------------|-----------------|
| South Africa   |                |                 |                 |
| Kenya          |                |                 |                 |
| Nigeria        |                |                 |                 |
| Egypt          |                |                 |                 |
| Morocco        |                |                 |                 |
| Algeria        |                |                 |                 |
| Ethiopia       |                |                 |                 |
| India          |                |                 |                 |
| Japan          |                |                 |                 |
| South Korea    |                |                 |                 |
| China          |                |                 |                 |
| Thailand       |                |                 |                 |
| Singapore      |                |                 |                 |

# Spain

## Utilization of Biomarkers

### Strengths

- HER2 testing in nearly 100% of patients; BRCA testing in >50% of high-risk cases.

### Weakness

- Regional disparities in access to BRCA, NGS, and liquid biopsy.

### Opportunity

- Standardize biomarker testing and expand liquid biopsy coverage.

### Threats

- Uneven implementation could impact treatment personalization.

5. 80% Biomarker testing is widely available and routinely performed as part of standard clinical practice. Strong integration into treatment decisions, with national coverage and reimbursement ensuring accessibility.
4. 61-80%. Biomarker testing is commonly used, but access may be limited in certain regions or patient groups. Some disparities exist in coverage or affordability, but it is still a crucial part of cancer diagnostics
3. 41-60% Moderate utilization, often restricted to major hospitals or private healthcare settings. Some patients may not receive biomarker testing due to cost or limited availability in public healthcare systems.
2. 20-40% Biomarker testing is available but underutilized, with significant barriers such as high costs, lack of awareness, or limited infrastructure. Many patients may not receive recommended biomarker assessments.
1. <20% Biomarker testing is rarely performed, often due to lack of infrastructure, awareness, or financial barriers. Patients typically do not receive targeted therapies based on biomarker status.

## Reimbursement

- Yes - A structured reimbursement system exists, ensuring biomarker testing is covered through national healthcare systems, insurance, or public-private partnerships. Patients face no direct financial burden.
- ◉

Partial - A reimbursement framework is in place, but patients may still have out-of-pocket expenses such as co-pays, limited coverage, or financial caps on testing.
- ✖

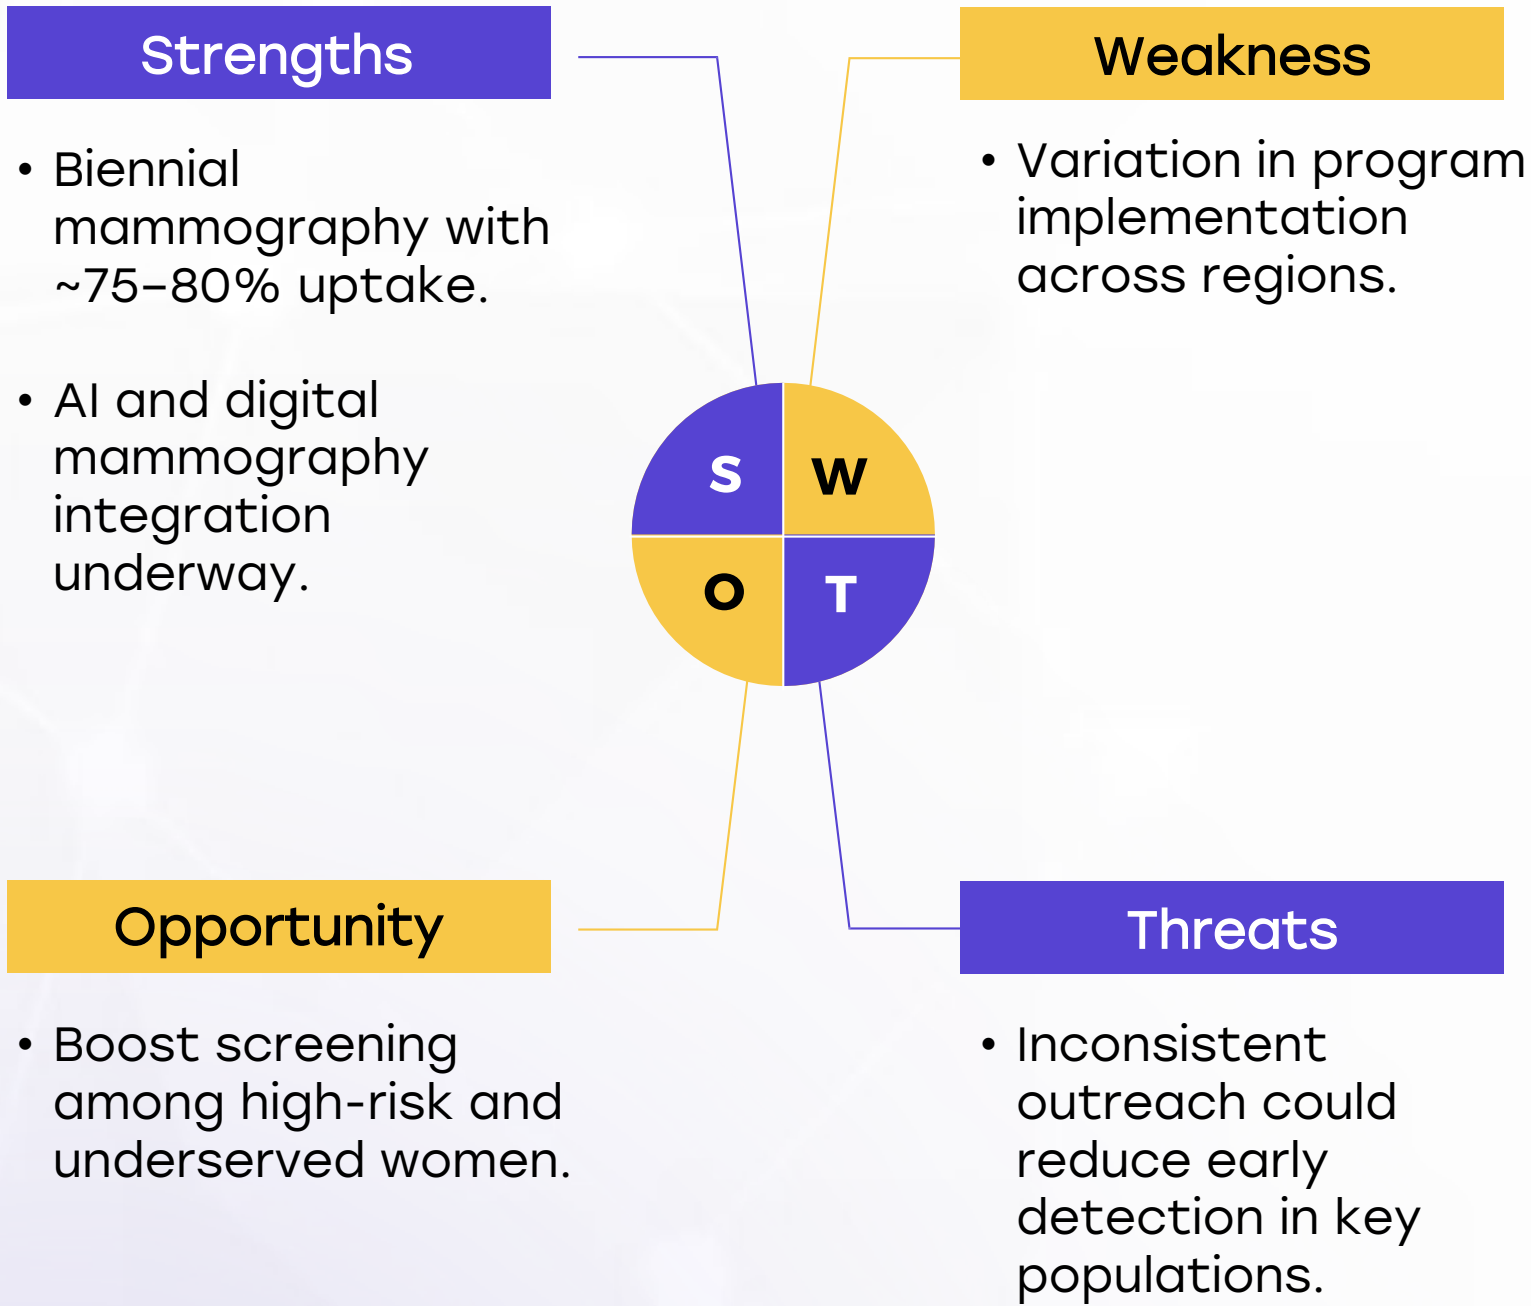

No - No formal reimbursement system exists, meaning patients must fully cover the cost of biomarker testing out-of-pocket.

## Breast Cancer Screening

| Country        | Breast Cancer Screening   |
|----------------|---|
| United States  | Biennial mammograms (50-74 years)                                 |
| United Kingdom | Triennial mammograms (50-71 years)                                |
| Canada         | Mammograms every 2-3 years (50-74 years)                          |
| Australia      | Biennial mammograms (50-74 years)                                 |
| Germany        | Mammograms every 2 years (50-69 years)                            |
| France         | Biennial mammograms (50-74 years)                                 |
| Netherlands    | Mammograms every 2 years (50-75 years)                            |
| Sweden         | Mammograms every 18-24 months (40-74 years)                       |
| Italy          | Mammograms every 2 years (50-69 years)                            |
| Spain          | Mammograms every 2 years (50-69 years)                            |
| Poland         | Mammograms every 2 years (50-69 years)                            |
| Japan          | Mammograms every 2 years (40+ years)                              |
| South Korea    | Biennial mammograms (40+ years)                                   |
| China          | Regional mammogram programs (40-69 years)                         |
| India          | Opportunistic screening   |
| Singapore      | Biennial mammograms (50-69 years)                                 |
| Saudi Arabia   | Opportunistic screening; regional programs for women aged 40+     |
| UAE            | Opportunistic screening; encouraged every 2 years for 40-69 years |
| Syria          | No national program; limited local initiatives due to conflict    |

| Country      | Breast Cancer Screening  |
|--------------|--|
| Thailand     | Biennial mammograms (50-69 years)  |
| South Africa | Opportunistic screening  |
| Kenya        | No national program  |
| Nigeria      | No national program  |
| Egypt        | National awareness campaigns   |
| Morocco      | National program for 45-69 years   |
| Algeria      | Planned national program (50-69 years)                                       |
| Ethiopia     | No national program  |
| Mexico       | Biennial mammograms (40-69 years)  |
| Brazil       | Biennial mammograms (50-69 years)  |
| Argentina    | Biennial mammograms (50-69 years)  |
| Chile        | Mammograms every 3 years (50-69 years)                                       |
| Colombia     | Biennial mammograms (50-69 years)  |
| New Zealand  | Biennial mammograms (45-69 years)  |
| Greece       | Biennial mammograms (50-69 years)  |
| Rwanda       | No national program  |
| Uganda       | No national program  |
| Serbia       | Biennial mammograms (50-69 years)  |
| Indonesia    | Opportunistic screening; no national mammography program                     |
| Vietnam      | Regional mammography programs; pilot programs in urban areas (age 45-69)     |
| Philippines  | Opportunistic screening; mammography recommended every 2 years for women 50+ |
| Russia       | National program for biennial mammograms (50-69 years)                       |
