

Prostate Cancer Factsheet: Insights & Key Developments

Key Insights on Prostate Cancer Care and Infrastructure

Core Pillars:

- 1. Infrastructure
- 2. Treatment Access, Research Funding and Awareness Campaigns
- 3. Survival Rates, Early Detection and Palliative Care
- 4. Utilization of Biomarkers
- 5. Clinical Guidelines
- 6. Reimbursement
- 7. Prostate Cancer Screening

Prostate cancer remains one of the most prevalent cancers worldwide, affecting millions of individuals each year. Despite advancements in diagnostics, treatment, and awareness, disparities in access to care, molecular testing, and specialized centers persist.

This factsheet provides a comprehensive overview of key pillars shaping Prostate cancer care, including specialized infrastructure, treatment accessibility, research funding, early detection, and palliative care.

- Incidence share: Number one cancer by incidence and death among Nigerian menaccounting for about 37-41% of male cancer cases.
- Incidence rate: Age-standardized rate approximately 41 per 100,000 men per year.
- Total new cases (2022): Around 18,000 men newly diagnosed.
- Daily diagnoses (2022): ~49 men per day.
- Deaths (2022): Approximately 11,600 men (around 28% of male cancer deaths).
- 5-year survival rate: Estimated to be 30-50%, with many cases detected at advanced stages.
- Most affected age group: Predominantly men aged 65 and older, but onset often earlier compared to global averages.
- Screening participation: Very low; no national PSA screening program; awareness initiatives exist but coverage remains limited.

0

Infrastructure

Strengths

- Presence of tertiary hospitals with oncology services in major cities (e.g., Lagos University Teaching Hospital, University College Hospital Ibadan).
- A few centers have access to radiotherapy and basic urology facilities.

Opportunity

- Public-private partnerships to build regional cancer centers with modern equipment.
- Training and capacitybuilding programs for cancer-focused healthcare workers.

Weakness

- Poor oncology infrastructure in rural areas; most facilities lack modern diagnostic tools like MRI or CT scanners.
- Inadequate trained personnel-limited number of oncologists, radiologists, and urologists relative to patient needs

Threats

- Heavy urban-rural divide in access to care.
- Healthcare infrastructure neglect, especially in Northern regions affected by conflict.

5. Advanced nationwide infrastructure, widespread availability in public and private sectors, integration with clinical practice.

4. Strong infrastructure in major hospitals and cancer centers, some regional disparities.

3. Moderate infrastructure, primarily in private settings or research institutions.

2. Limited infrastructure, available only in select centers or for high-cost private testing.

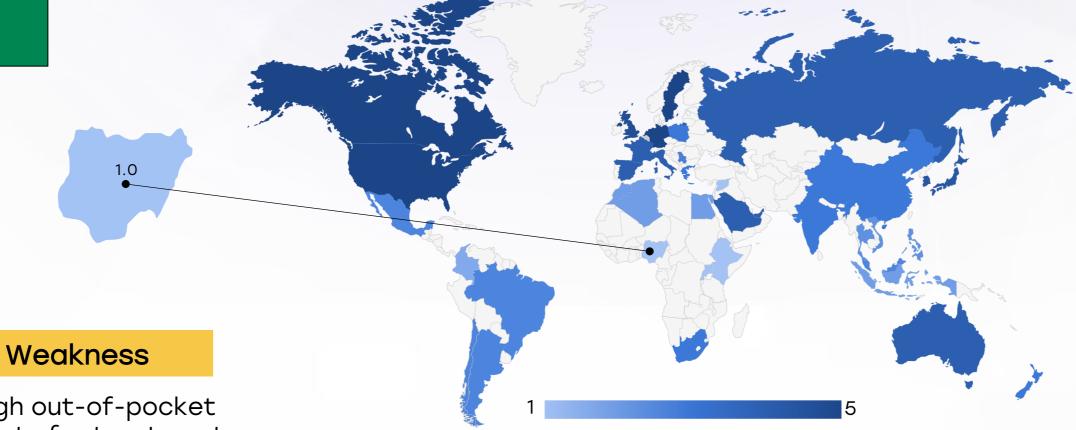

1. Minimal or no infrastructure, testing mostly unavailable or sent abroad.

Treatment Access, Research Funding and Awareness Campaigns

Strengths

- Select urban centers offer chemotherapy, surgical, and hormone therapy options for prostate cancer.
- NGOs like Project Pink Blue and local foundations promote prostate cancer awareness.

Opportunity

- Encourage international collaborations for research and funding.
- Expand communitybased awareness programs, especially in underserved regions.

- High out-of-pocket costs for treatment; limited insurance coverage.
- Minimal government funding for cancer research, with prostate cancer underrepresented.

- Low health literacy leads to late presentation.
- Lack of political will to prioritize malespecific cancers.

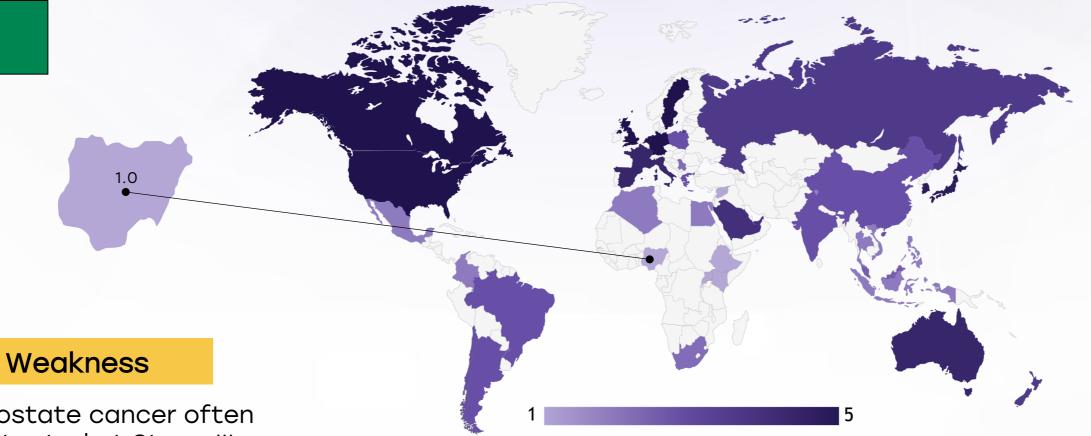

- 5. Strong healthcare infrastructure with comprehensive treatment access, high research funding, and nationwide awareness campaigns. Patients have access to advanced therapies, clinical trials, and widespread early detection programs.
- 4. Well-developed system with good treatment availability, strong research funding, and effective but regionally focused awareness campaigns. Some disparities may exist in rural areas or between public and private sectors.
- 3. Moderate development, with specialized treatments available in major hospitals, research funding concentrated on specific cancers, and occasional but limited awareness efforts. Healthcare access may be restricted by cost or geography.
- 2. Limited system where cancer treatment is available only in select urban centers, research funding is minimal or sporadic, and awareness campaigns are rare or underfunded. Patients often face long wait times or financial barriers.
- 1. Poor infrastructure with severe barriers to treatment, little to no research funding, and lack of structured awareness campaigns. Cancer care is largely inaccessible, with many patients relying on out-of-pocket expenses or external aid.

Survival Rates, Early Detection and Palliative Care

Strengths

- National cancer control policy includes palliative care as a priority area.
- Increasing presence of palliative units in teaching hospitals.

• Pros

- Prostate cancer often detected at Stage III or IV, lowering survival outcomes.
- Inadequate pain management and late referral to palliative care.

- 5. High survival rates, strong early detection programs, and well-established palliative care services. Patients have access to timely diagnosis, advanced treatments, and comprehensive end-of-life care.
- 4. Good survival rates, effective early detection efforts, and accessible but regionally limited palliative care. Some disparities may exist in rural areas or for specific cancer types.

Opportunity

- Launch mobile health outreach to increase early detection in rural areas.
- Training more nurses and GPs in basic palliative care and symptom management.

Threats

- Stigma, fear, and traditional beliefs delay presentation and palliative acceptance.
- Lack of opioid access and palliative supplies.

3. Moderate survival rates, early detection available but not widespread, and palliative care services mainly in urban centers. Some patients experience delays in diagnosis or limited end-of-life care.

- Low survival rates, early detection efforts are inconsistent or underfunded, and palliative care is minimal or only available in select hospitals. Cancer patients face significant access barriers.
 - 1. Very low survival rates, poor early detection infrastructure, and almost no palliative care services. Many patients are diagnosed late and lack proper support for pain management and end-of-life care.

Utilization of Biomarkers

Strengths

- PSA testing is available in private and some public hospitals.
- Local research is emerging on BRCA mutations in West African populations, particularly among high-risk individuals.

Opportunity

- Integrate PSA testing into routine men's health checks in PHCs.
- Invest in biomarker labs and genomic research, targeting high-risk African populations.

Weakness

- Advanced biomarker testing (PTEN, TMPRSS2-ERG) rarely available outside research settings.
- Low awareness among healthcare providers about genomic profiling in prostate cancer.

Threats

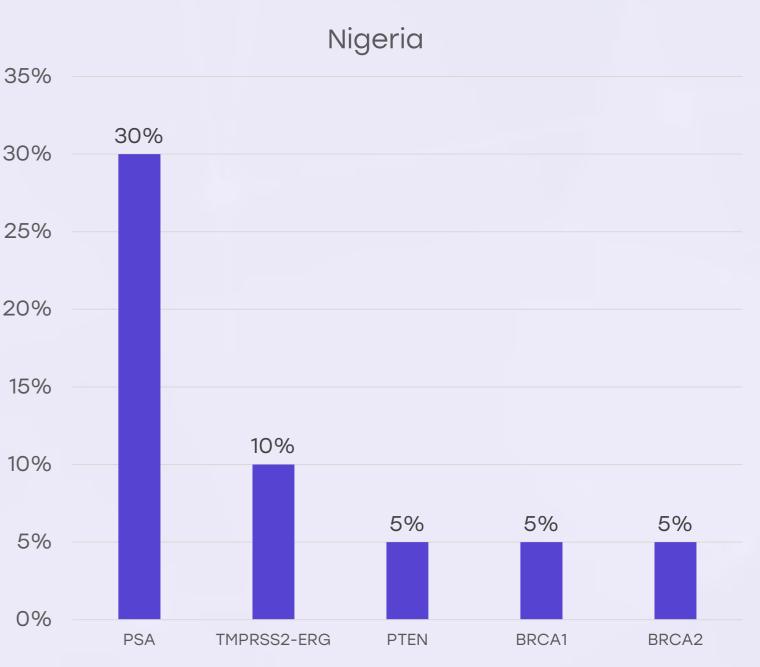

- · Lack of standardized labs leads to inconsistent biomarker interpretation.
- Economic limitations restrict scaling of genomic medicine.

Moderate utilization, often restricted to major hospitals or private healthcare settings. Some patients may not receive biomarker testing due to cost or limited availability in public healthcare systems.

0.367

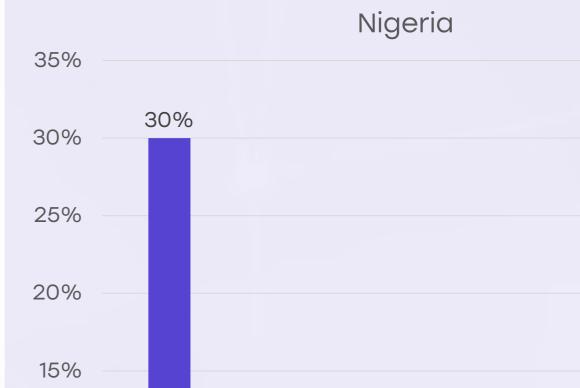

Biomarker testing is available but underutilized, with significant barriers such as high costs, lack of awareness, or limited infrastructure. Many patients may not receive recommended biomarker assessments.

Biomarker testing is rarely performed, often due to lack of infrastructure, awareness, or financial barriers. Patients typically do not receive targeted therapies based on biomarker status.

0

Nigeria Clinical Guidelines

0

Strengths

- Nigeria follows adapted global cancer treatment protocols like NCCN and ESMO where possible.
- Government developed a National Cancer Control Plan (NCCP), which includes prostate cancer.

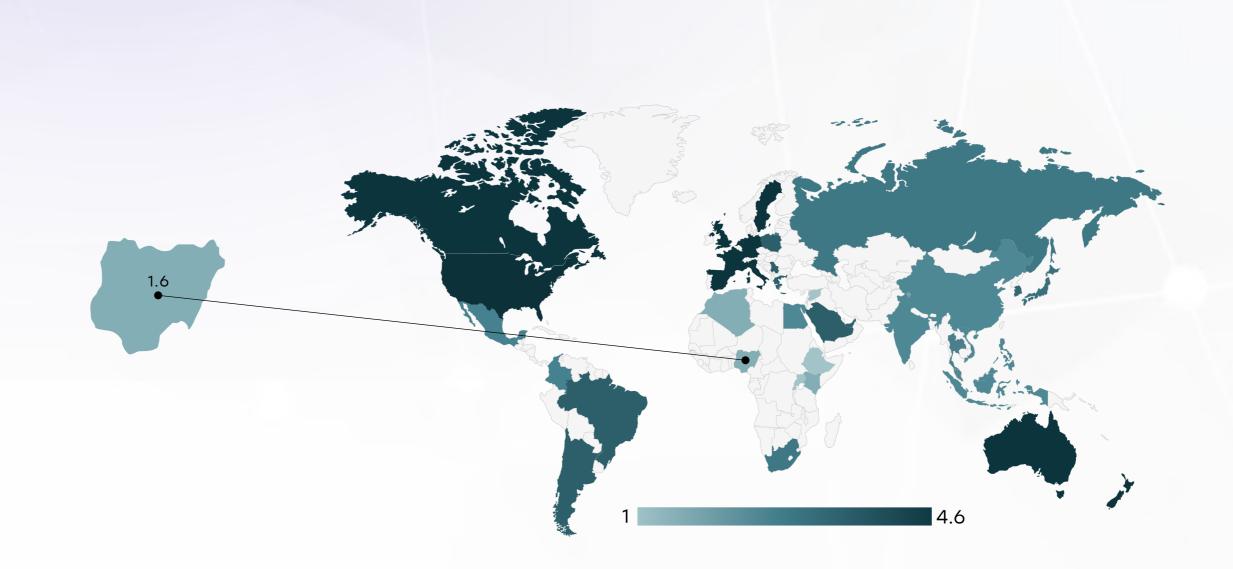

Opportunity

- Develop local prostate cancer guidelines informed by African patient characteristics.
- Incorporate biomarker use into standard treatment pathways.

Weakness

- Inconsistent implementation of guidelines across public hospitals.
- Most hospitals lack prostate cancerspecific protocols tailored to local needs

- Without regulation, clinical practice remains highly variable.
- Resource gaps hinder full adherence to any standardized guidelines.

Nigeria III Reimbursement

0

Strengths

- The NHIS (National Health Insurance Scheme) covers basic prostate cancer screening and consultations in select plans.
- Some government hospitals offer subsidized diagnostic services.

Opportunity

- Expand NHIS coverage to include cancerspecific packages, especially for earlystage care.
- Collaborate with pharmaceutical companies for access programs.

Weakness

- Majority of patients are uninsured or underinsured.
- Targeted therapies and newer drugs are not reimbursed and remain unaffordable for most.

- High inflation and healthcare budget constraints affect sustainability of public subsidies.
- Out-of-pocket costs remain prohibitively high, discouraging early testing.

- A structured reimbursement system exists, ensuring biomarker testing is covered through national healthcare systems, insurance, or public-private partnerships. Patients face no direct financial burden.
- A reimbursement framework is in place, but patients may still have out-of-pocket expenses such as co-pays, limited coverage, or financial caps on testing.
- No formal reimbursement system exists, meaning patients must fully cover the cost of biomarker testing out-of-pocket.

S

0

W

Strengths

- PSA screening offered during health fairs and NGO-run programs in cities.
- Growing use of churches, mosques, and social groups for health education on male cancers.

Weakness

- No national prostate cancer screening program.
- Screening is largely opportunistic and urbanfocused, missing rural populations

Opportunity

- Launch risk-based screening programs for men over 50 and those with family history.
- Utilize primary healthcare centers (PHCs) for decentralized screening access.

- Cultural stigma and poor health-seeking behavior among men.
- Mistrust in healthcare limits screening participation.

Country	Prostate Cancer Screening
United States	Annual LDCT (50-80 years, high-risk smokers)
United Kingdom	LDCT for high-risk individuals (55-74 years)
Canada	LDCT for high-risk individuals (55-74 years)
Australia	No national program, high-risk groups advised LDCT
Germany	No national program, under evaluation
France	No national LDCT screening
Netherlands	Participating in European screening studies
Sweden	No national LDCT screening
Italy	Regional pilot LDCT screening
Spain	No national LDCT program
Poland	No national program
Japan	No national LDCT program
South Korea	LDCT for high-risk individuals (50-74 years)
China	No national LDCT program
India	No national LDCT program
Singapore	No national LDCT program
Saudi Arabia	No national LDCT program; some hospital-based opportunistic screening
UAE	No national LDCT program; early-stage pilot studies ongoing in select hospitals
Syria	No national LDCT program; screening not prioritized due to conflict
Malaysia	No program; high-risk CT pilots

Country	Prostate Cancer Screening
Thailand	No national LDCT program
South Africa	No national LDCT program
Kenya	No national LDCT program
Nigeria	No national LDCT program
Egypt	No national LDCT program
Morocco	No national LDCT program
Algeria	No national LDCT program
Ethiopia	No national LDCT program
Mexico	No national LDCT program
Brazil	No national LDCT program
Argentina	No national LDCT program
Chile	No national LDCT program
Colombia	No national LDCT program
New Zealand	No national LDCT program
Greece	No national LDCT program
Rwanda	No national LDCT program
Uganda	No national LDCT program
Serbia	No national LDCT program
Indonesia	No national LDCT program; opportunistic screening in private sector
Vietnam	No national LDCT program; early pilot screening studies in Hanoi and Ho Chi Minh
Philippines	No national LDCT program; feasibility and awareness programs under discussion
Russia	No formal national LDCT program; regional pilot screening programs in large cities
