

# Breast Cancer Factsheet: Insights & Key Developments

Key Insights on Breast Cancer Care and Infrastructure

#### Core Pillars:

- 1. Infrastructure
- 2. Treatment Access, Research Funding and Awareness Campaigns
- 3. Survival Rates, Early Detection and Palliative Care
- 4. Utilization of Biomarkers
- 5. Clinical Guidelines
- 6. Reimbursement
- 7. Breast Cancer Screening

Breast cancer remains one of the most prevalent cancers worldwide, affecting millions of individuals each year. Despite advancements in diagnostics, treatment, and awareness, disparities in access to care, molecular testing, and specialized centers persist.

This factsheet provides a comprehensive overview of key pillars shaping breast cancer care, including specialized infrastructure, treatment accessibility, research funding, early detection, and palliative care.

- Lifetime Risk: 1 in 8 women will develop breast cancer, 1 in 36 will die from it.
- New Cases (2022): 28,600 women diagnosed, 25% of all new cancer cases in women.
- Deaths (2022): 5,500 women died, 14% of all cancer deaths in women.
- Age Distribution: 83% of cases occur in women aged 50 and over.
- 5-Year Survival Rate: 89%.
- Survival by Stage:
- Stage 1: 100%
- Stage 2: 92%
- Stage 3: 74%
- Stage 4: 23%
- Trends in Younger Women (1984–2019):
- 45.5% increase in women in their 20s.
- 12.5% increase in women in their 30s.
- 9.1% increase in women in their 40s.
- Projected Cases (2023): 29,400 women, 80 diagnoses per day.
- Projected Deaths (2023): 5,400 women, 15 deaths per day.

# Canada I \* I

Infrastructure

#### Strengths

- Over 70 cancer centers offer advanced care and clinical trials.
- HER2, ER, PR, and BRCA testing widely available across major provinces.

## SW

ОТ

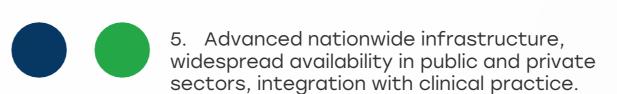

#### Weakness

- Access to nextgeneration sequencing (NGS) varies by province.
- Longer diagnostic turnaround times in rural/remote areas.

#### Opportunity

- Expand precision oncology through national initiatives like CPCOC.
- Strengthen lab capacity and telehealth services in underserved regions.

- Regional inequities may undermine national quality standards.
- Delayed test access could hinder early personalized treatment.

- 3. Moderate infrastructure, primarily in private settings or research institutions.
- 2. Limited infrastructure, available only in select centers or for high-cost private testing.
- 1. Minimal or no infrastructure, testing mostly unavailable or sent abroad.

Treatment Access, Research Funding and Awareness Campaigns

## Strengths

- Universal coverage for surgery, radiotherapy, and targeted therapies.
- Over CAD 100M annually invested in breast cancer research.

Opportunity

- S W
- Innovati treatme timelines vary across provinces.
- Lower trial participation and campaign reach in remote communities.

#### **Threats**

 Streamline drug High-cost therapies approval and funding may face reimbursement delays. across provinces.

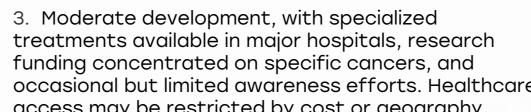

0

 Expand national Underrepresentation of Indigenous and rural awareness campaigns populations in via primary care channels. outreach.

- 5. Strong healthcare infrastructure with comprehensive treatment access, high research funding, and nationwide awareness campaigns. Patients have access to advanced therapies, clinical trials, and widespread early detection programs.
- 4. Well-developed system with good treatment availability, strong research funding, and effective but regionally focused awareness campaigns. Some disparities may exist in rural areas or between public and private sectors.
- 3. Moderate development, with specialized treatments available in major hospitals, research funding concentrated on specific cancers, and occasional but limited awareness efforts. Healthcare access may be restricted by cost or geography.
- 2. Limited system where cancer treatment is available only in select urban centers, research funding is minimal or sporadic, and awareness campaigns are rare or underfunded. Patients often face long wait times or financial barriers.
- 1. Poor infrastructure with severe barriers to treatment, little to no research funding, and lack of structured awareness campaigns. Cancer care is largely inaccessible, with many patients relying on out-of-pocket expenses or external aid.

Survival Rates, Early Detection and Palliative Care

#### Strengths

- 5-year survival rate exceeds 88%; Stage I survival at 100%.
- Organized screening programs exist in all provinces.

Opportunity

Expand mobile and

programs.

MRI.

• Enhance early

home-based palliative

detection through risk-

based screening and

O T

#### Weakness

- Regional variations in palliative care availability and early diagnosis.
- Access to end-of-life care is less consistent in rural/Indigenous communities.

#### Threats

- Demographic trends may strain palliative and survivorship services.
  - Screening fatigue or cultural mistrust may reduce uptake.

- 5. High survival rates, strong early detection programs, and well-established palliative care services. Patients have access to timely diagnosis, advanced treatments, and comprehensive end-of-life care.
- 4. Good survival rates, effective early detection efforts, and accessible but regionally limited palliative care. Some disparities may exist in rural areas or for specific cancer types.

3. Moderate survival rates, early detection available but not widespread, and palliative care services mainly in urban centers. Some patients experience delays in diagnosis or limited end-of-life care.

2. Low survival rates, early detection efforts are inconsistent or underfunded, and palliative care is minimal or only available in select hospitals. Cancer patients face significant access barriers.

1. Very low survival rates, poor early detection infrastructure, and almost no palliative care services. Many patients are diagnosed late and lack proper support for pain management and end-of-life care.

## Canada I\*I

**Utilization of Biomarkers** 

#### Strengths

- 95% receive HER2 testing; BRCA tests publicly funded for high-risk groups.
- NGS integration growing through precision medicine programs.

# s w

#### Weakness

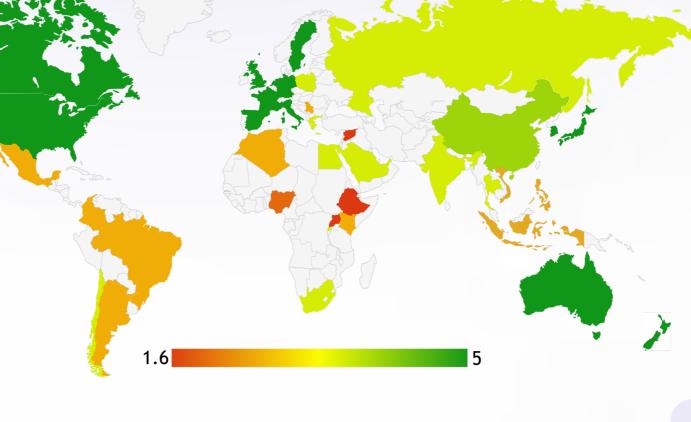

- Rural areas face delayed biomarker results due to lab shortages.
- BRCA testing uptake still below optimal (~40-50% of eligible patients).

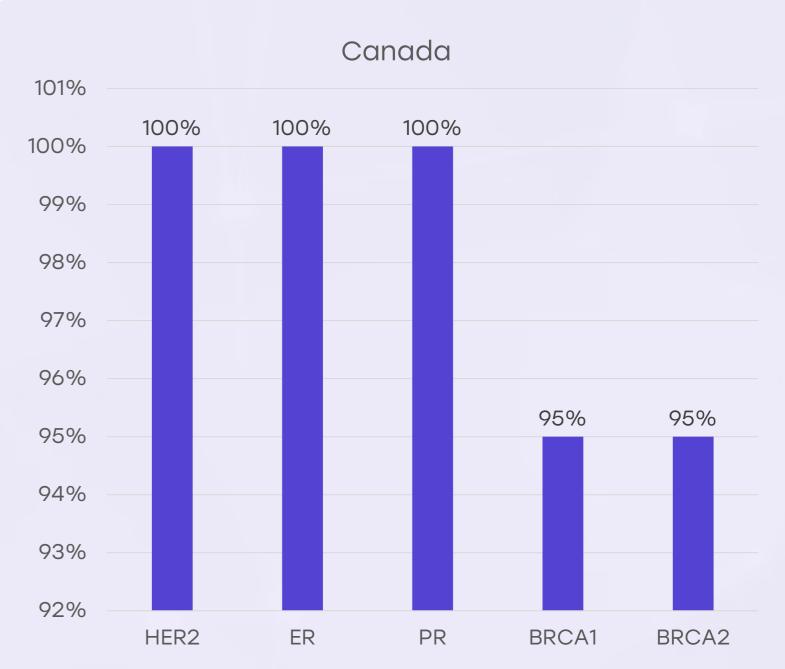

## Opportunity

- Expand genetic counseling and digital referrals.
- Standardize turnaround benchmarks across provinces.

- Inconsistent lab infrastructure could delay time-sensitive treatments.
- Reimbursement barriers may slow broader adoption of new biomarkers.

- 5. 80% Biomarker testing is widely available and routinely performed as part of standard clinical practice. Strong integration into treatment decisions, with national coverage and reimbursement ensuring accessibility.
  - 4. 61-80%. Biomarker testing is commonly used, but access may be limited in certain regions or patient groups. Some disparities exist in coverage or affordability, but it is still a crucial part of cancer diagnostics
  - 3. 41-60% Moderate utilization, often restricted to major hospitals or private healthcare settings. Some patients may not receive biomarker testing due to cost or limited availability in public healthcare systems.
  - 2. 20-40% Biomarker testing is available but underutilized, with significant barriers such as high costs, lack of awareness, or limited infrastructure. Many patients may not receive recommended biomarker assessments.
  - <20% Biomarker testing is rarely performed, often due to lack of infrastructure, awareness, or financial barriers. Patients typically do not receive targeted therapies based on biomarker status.

# Canada I \*I

#### **Clinical Guidelines**

#### Strengths

- ESMO/NCCNaligned protocols widely adopted across Canada.
- High implementation feasibility due to strong healthcare system.

## s w

0 T

#### ovincial va

Weakness

- Provincial variation in the pace of guideline integration.
- Smaller institutions may lack capacity for frequent updates.

### Opportunity

- Use centralized digital platforms for updates and CME.
- Expand efforts targeting underserved and Indigenous care providers.

- Lag in updating or implementing innovations may affect consistency.
- Gaps in rural application risk creating unequal treatment standards.

Reimbursement

#### Strengths

- Public healthcare covers all standard diagnostics and therapies.
- HER2, ER, PR, and BRCA testing reimbursed for most patients.

## s w

0

#### Weakness

- Novel therapy approvals can take 12-18 months in some provinces.
- Access to newer agents (e.g., CDK4/6, PARP inhibitors) still uneven.

#### Opportunity

- Harmonize national and provincial drug funding processes.
- Expand early-access pathways for innovative treatments.

- Delayed reimbursement may impact timely patient outcomes.
- Regional delays create access inequities despite universal coverage.

- Yes A structured reimbursement system exists, ensuring biomarker testing is covered through national healthcare systems, insurance, or public-private partnerships. Patients face no direct financial burden.
- Partial A reimbursement framework is in place, but patients may still have out-of-pocket expenses such as co-pays, limited coverage, or financial caps on testing.
- No No formal reimbursement system exists, meaning patients must fully cover the cost of biomarker testing out-of-pocket.

## Canada | \*| **Breast Cancer Screening**

## Strengths

- Organized biennial mammograms for ages 50-74 funded nationwide.
- Participation rates exceed 70% in many provinces.

# 0

#### Weakness

- Lower screening rates in remote, rural, and Indigenous communities.
- Geographic and logistical barriers remain in some provinces.

#### Opportunity

- Increase uptake through mobile units and personalized screening invites.
- Integrate BRCA risk pathways for early MRI screening eligibility.

- Health literacy and access gaps may limit future improvements.
- Unequal outreach may worsen existing disparities.

Country	Breast Cancer Screening
United States	Biennial mammograms (50-74 years)
United Kingdom	Triennial mammograms (50-71 years)
Canada	Mammograms every 2-3 years (50-74 years)
Australia	Biennial mammograms (50-74 years)
Germany	Mammograms every 2 years (50-69 years)
France	Biennial mammograms (50-74 years)
Netherlands	Mammograms every 2 years (50-75 years)
Sweden	Mammograms every 18-24 months (40- 74 years)
Italy	Mammograms every 2 years (50-69 years)
Spain	Mammograms every 2 years (50-69 years)
Poland	Mammograms every 2 years (50-69 years)
Japan	Mammograms every 2 years (40+ years)
South Korea	Biennial mammograms (40+ years)
China	Regional mammogram programs (40-69 years)
India	Opportunistic screening
Singapore	Biennial mammograms (50-69 years)
Saudi Arabia	Opportunistic screening; regional programs for women aged 40+
UAE	Opportunistic screening; encouraged every 2 years for 40-69 years
Syria	No national program; limited local initiatives due to conflict

Country	Breast Cancer Screening
Thailand	Biennial mammograms (50-69 years)
South Africa	Opportunistic screening
Kenya	No national program
Nigeria	No national program
Egypt	National awareness campaigns
Morocco	National program for 45-69 years
Algeria	Planned national program (50-69 years)
Ethiopia	No national program
Mexico	Biennial mammograms (40-69 years)
Brazil	Biennial mammograms (50-69 years)
Argentina	Biennial mammograms (50-69 years)
Chile	Mammograms every 3 years (50-69 years)
Colombia	Biennial mammograms (50-69 years)
New Zealand	Biennial mammograms (45-69 years)
Greece	Biennial mammograms (50-69 years)
Rwanda	No national program
Uganda	No national program
Serbia	Biennial mammograms (50-69 years)
Indonesia	Opportunistic screening; no national mammography program
Vietnam	Regional mammography programs; pilot programs in urban areas (age 45-69)
Philippines	Opportunistic screening; mammography recommended every 2 years for women 50+
Russia	National program for biennial mammograms (50-69 years)
